

INTERNATIONAL MEETING

Dual or cooperative training in the context of European Higher Education

IMH Elgoibar
28th October 2011

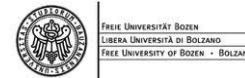

PRESENTATION

Cooperative training is based on the principle of sharing training time between the school and company in the exercise of a profession, through which the identity of the learner is being patterned and transformed.

In this sense, we must remember that this training model is a contrasted fact in Europe, with demonstrable successful results and integrated in Bologna

In this conference we will have de opportunity to listen to European representatives' experiences from several entities and schools, which illustrate the study cases and experiences of a phenomenon which is growing in educational and social scopes.

SPEAKERS
